I'm developing a web application with MongoDB as the database, and I need to define a class called "documents". I want to add another attribute to this class called "type". Should I name the class "document_type"? A: Yes, definitely. Although, it's not always a bad idea. But it's a bad idea when: It is a numeric class. It has many associated fields. It is a class used for input or output. I'd say that you should name your class something that makes sense to you. A: I would
