I recently switched from CS6 to LR7 and I am very glad to have gone. I am loving the enhancements that have been made since last bumped, and especially the new feature set that makes use of the latest Ps updates. The New filter collection is absolutely amazing and I use some of the built in editor tools daily. The selection tools are smart and very intuitive and they manage the workflow very nicely as well. Editing speed in PS has never been better and I really enjoy the new features that LR7 has to offer. LR is lightning fast, and though I've been using Photoshop since CS2, I'm not a master of this program so I'd be remiss if I didn't mention a few key tools that new users might be unfamiliar with. However, as my photos keep coming and I get more Photoshop savvy, I'll cover the basics. One thing that I miss most about Windows, besides inability to consistently control one's own volume settings, is that I'd forgotten just how powerful the Select -> Transform > Warp tool is. Next, I touch up my curves in LR, use the Layer Blur filter for sharpening, and tweak my masks. The one thing I never even knew existed was the Mini Bridge utility. I'm in Photoshop daily for days, and it's nice to be able to load a photo instantly from the Mini Bridge, rather than having to download it and wait. I have been using Photoshop for five years now. It has become the center of my workflow and has grown on me so much that the controls have become very familiar and I find myself using them with a bit more confidence to make picture editing my daily routine.
