The most recent version of Photoshop, CS6, adds a new System Information panel that helps you keep up with performance problems that may be impacting your work. You can Troubleshoot issues, even when they don't give you an immediate error, and designate them as "Settable." When you no longer need to work on an exhibit, you can simply set the issue to a neutral state. The marquee feature of Photoshop's newest version is the new Brush tool. Now, you can select the brush that you want to use to paint on the canvas instead of painting on a new layer. You have a lot of options for how to paint. You can paint with a brush, eraser, pen, airbrush or specialty types of brush (like camouflage, etc). You can also see how your brush appears before you paint. You can create brushes on Photoshop's surface by using the Brush tool. To do so, click down at the center of the tool's grip and slide your cursor to the right half of the grip. You'll be able to see an icon with a brush icon on it appear on the canvas as you do. You can choose which brush type you want to use by clicking. If you click once to begin painting, you can drag with the tool by pressing shift. Photoshop has long been a tool for designers. But with the **Accelerated Network Graphics feature** in this release, it's also a tool for designers with computers connected over networks. (They shouldn't worry about wasting bandwidth now.) **Live Texture Channel** makes it possible for you to save frequently used textures as a full-fledged channel. Use the button in the **Channel Thesaurus** panel for quick, sample access to the first 110 textures, or use the drop-down menus in the **Texture Browser** to choose your favorite.
